

Sustainable Development in Agriculture
and the Global Climate Change

István Láng
Secretary General
Hungarian Academy of Sciences
Member of the World Commission on
Environment and Development

Closing Speech.

Population growth basically determines both the character of global problems and the answers to be given to them by global policy. According to the publication *World Resources 1990-1991*, the population of the world in 1960 was 3019 million, in 1990 it is 5292 million, and it is forecasted to be 8466 million by 2025. Within this, the ratio of Africa, South-America and Asia has risen from 69% (in 1960) to 76% by now, and it is likely to reach 82% by 2025. Together with the growth of the population, people increasingly demand the satisfaction of their biological needs. Food and healthy drinking water take the first place among the basic human needs. Due to the growth in both population and the above-mentioned demand, the food production of the world has
